IMPROVED FUNCTIONS

OCTAdesign® 17 / OCTAcad® 17

NEW IN OCTADESIGN® 17

OCTAdesign VR allows you to turn your OCTAdesign scenes into 3D presentations in a matter of seconds. The presentation can be viewed by your customer using a current browser on all end devices (PC, tablet, smartphone) in real time.

Thanks to the completely new OCTALUMINA function, you can now create lit up worlds using OCTALUMINA 120, 40, and the OCTALUMINA cube within a few clicks. An intelligent graphics function helps you to place your graphics on walls and around corners.

Thanks to the new autoselect function for OCTAwall and OCTAwall custom, walls constructed from frames are created significantly quicker.

On top, a lot of details were improved. For example, the installation process was simplified and the combination of similiar components and an extended texturebaking function were introduced.

NEW IN OCTACAD® 17

Selection of similar components in a drawing using a range of selection criteria	Colour coding of different profile types and lengths
Inclusion of a table of selected objects into a drawing	New function for material and colour attribution
New legend function for upright and beam extensions and cover plates	Construction of shelves or fabric surfaces through selection of an upright or beam extrusion
New caption function for components in drawings	Selection of several parts list options. Generate a table of parts list.
Comfortable layer management
