OCTANORM ®

.OCTAQUICK.
EXHIBITING HAS NEVER
BEEN EASIER OR MORE
COST-EFFECTIVE...

Participating in exhibitions requires an investment of both time and money. Our new OCTAquick has been purpose-designed to help you achieve maximum benefit with minimum commitment to the time and cost required to build and dismantle stands. OCTAquick is a new portable exhibition stand system that fits into the back of an estate car and can be assembled in minutes by unskilled personnel. The system comprises four basic modules for the construction of displays that range from a simple panel wall to a medium sized exhibition stand, each set of components being complete with three spotlights and a power cable. With OCTAquick's high quality components and stylish design, your self-build stand has a truly professional appearance to help you achieve optimum impact and effectiveness. And you have complete control over construction and dismantling.

OCTAQUICK "3X3".
THE MODULE FOR MAXIMUM IMPACT.

Example types: Q 40, Q 41

Sturdy transport case

Easy and precise assembly

Trusted OCTANORM tension lock joint

A full 9 square metres of exhibition space constructed in minutes from components trans-ported in 2 carry cases in the back of your estate car – that´s the OCTAquick »3x3« module. Beams and poles fit together quickly and simply - the secret is the OCTANORM joint with its easy to use tension lock. Print your graphics onto fabric banners that are suspended from the beams by means of clips. Alternatively, use solid infill panels, which can also be fitted into the beams. Components, including three 150-watt spotlights and a power cable, are positioned in the carry case, whilst the case itself has castors for ease of transportation. Accessories include counters, display cases and literature racks (see pages 14-15) to help you get the most from your stand space.
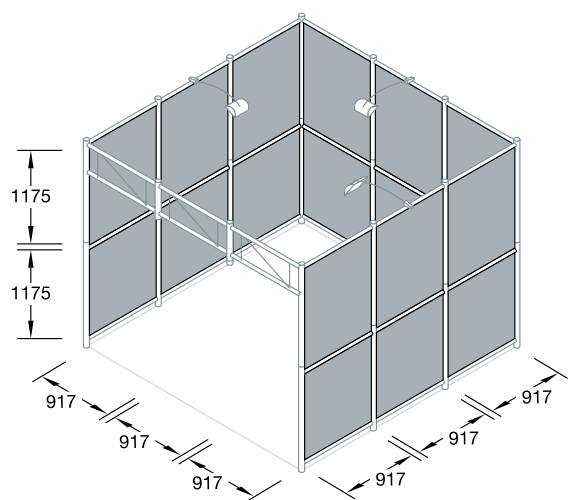

Suspending the fabric panel

weight: 23.35 lb/11.5 kg

Q 42
Wall infill panel set, white, 3.2 mm,
including 9 beams and transport case Q 503
weight: 178.57 lb/81.0 kg

Example types: Q 30, Q 32

Q 370 spotlight

Shelf set Q 80

Wall infill panels

Where space is less readily available, the OCTAquick »3x2« module enables impact to be combined with economy. It uses the same high quality components – beams, poles and infill panels – to create 6 square metres of useable exhibition space. Again graphics can be printed onto fabric banners and suspended from beams. If solid infill panels are used, shelves can be fitted as optional extras to create more display area. The basic metalwork together with three 150-watt spotlights are housed in two robust carry cases fitted with castors for ease of handling. The system is very stable when erected and does not depend on infill panels for its structural integrity. Accessories include counters, display cases and literature racks (see pages 14-15) to help you get the most from your stand space.

.OCTAQUICK "3X1".
EFFECTIVE DISPLAY
IN A COMPACT AREA.

Example types: Q 20, Q 21

Suspension of wire rope poster frame set Q 90

Panel fixing Q 91

Truss beam design

Where exhibition space is at a premium, the OCTAquick »3x1« module enables effective displays to be mounted in the most compact area. The assembled components create 3 square metres of useable exhibition space. For companies operating on a divisional basis or where topical information needs to be frequently updated, printed fabric banners can be used to form a constant background with framed graphic panels employed to present current information. All metalwork components, including three 150-watt spotlights, are housed in two carry cases ready for quick and easy erection. Accessories include counters, display cases and literature racks (see pages 14-15) to help you get the most from your stand space.
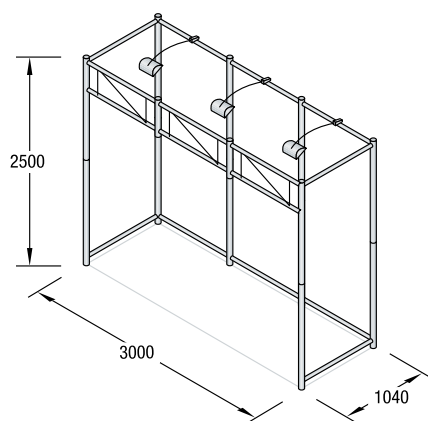

Easy cable routing

Separately installable lighting

OCTAquick' Q10 module is a panel display system with the potential to become an exhibition stand. Using OCTAquick beams and poles it provides 3 linear metres of panel display area and is supplied complete with three 150-watt spotlights and a power cable. Infill panels can be fabric or solid with graphics applied as required. Q10 modules can be used individually or in combination, or integrated with other OCTAquick modules to form exhibition stands. Accessories include a panel-mounted literature holder and a free-standing literature rack (see pages 14-15).

Basic OCTAquick exhibition stand modules can be expanded simply and easily with a purpose designed extension module illustrated above. The extension module is supplied in its own carry case complete with a 150-watt spotlight and power cable. The OCTAquick accessories range has been carefully formulated to provide optional extras that will help to maximise the use of exhibition space. The result is a range of unique self-build modules and accessories for the effective presentation of a company, its products and services. Exhibiting has never been so easy or cost-effective.

*Naturally your creativity is required here: we will be glad to advise you on all stand varieties.
