- adaptable to any room situation
- easy to clean
- modular and flexible
- changeable labelling of the rooms
- reusable and sustainable

Technical Information:

- upright extrusion size: 40 × 40 mm
- standard height: 2500 mm
- panel thickness: 4 mm
PVC hard foam panel (B1)

GOVERNMENTAL RECOMMENDATIONS

Organization of COVID-19 Vaccination

Areas and Functions

In their recommendation for the organization and implementation of immunization against Sars-CoV-2, the German Federal Ministry of Health has provided an overview of the

areas and their functions with detailed specifications of all tasks and structures regarding process, hygiene and safety. Benefit from our professional competence for an individual adaptation to your local situation.

Area		Functions
Vaccination Center Management		<ul style="list-style-type: none"> management of the vaccination center (office) staff rest room and changing room
Vaccination Area	Administration	<ul style="list-style-type: none"> administration „check-in“, vaccine eligibility check „check-out“ language mediation
	Information and Vaccination	<ul style="list-style-type: none"> information and advice, indication testing vaccination, documentation observation and first aid, if necessary
Infrastructure	People Flow Management and Security	<ul style="list-style-type: none"> arrival + distribution of face masks for people to be vaccinated waiting areas exit + disposal of face masks for people to be vaccinated physical security of the building incl. vaccines and accessories
	Facility Management*	<ul style="list-style-type: none"> facility management (maintenance and repair) sanitary facilities cleaning and disposal
	Logistics (incl. Vaccine Management)	<ul style="list-style-type: none"> material storage vaccine storage vaccine handling

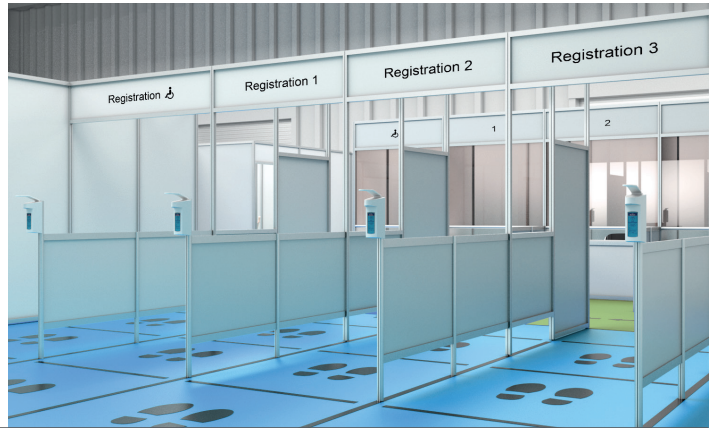

* For sanitary facilities and disposal, we recommend using existing infrastructures.

IMMUNIZATION CONCEPT

COVID-19 Vaccination Centers

Check-in/Registration/Information

A structured process is essential for a fast and safe handling. With our vaccination centers, not only you but also the patients benefit from a high standard of hygiene through distance markings, disinfection possibilities and a one-way guidance system that also ensures shorter waiting times. Rooms for information and advice are also provided.

Vaccination Area/Aftercare

Employee protection and safety are the first priority here. A controlled flow of visitors makes sure that only one patient is admitted to the treatment room for vaccination, with additional screens contributing to more privacy. The labelling of the rooms can be changed and adapted to current needs at any time. Controlled check-out areas are included.

Back Office, Staff and Storage Rooms

From lockable changing rooms to staff break rooms, from emergency cabins to back office and storage rooms for medical equipment – our modular partition wall system helps you create a vaccination center that meets all your individual needs and requirements.
