➤ TI-DB-3.4	14
octaclassic floor Positioning of adjustable feet	
➤ TI-DB-5.0	15
octaclassic floor adaption of EPL 2 to sandwich panel SP 30 (SP 13)	

Light Load:

750 kg/panel (1x1m) (*)

Positioning of adjustable feet in the corners of the floor panels.

Number of adjustable feet required:

Number of panels in width + 1
x number of panels in depth + 1

= number of adjustable feet

Example:

Floor space: 4 panels x 3 panels
(4+1) x (3+1) = 20 adjustable feet

Medium Load:

2000 kg/panel (1x1m) (*)

Positioning of adjustable feet in the corners and on the edges of the floor panels.

Number of adjustable feet required:

Number of panels in width x 2 + 1
x number of panels in depth x 2 + 1
- total number of panels

= number of adjustable feet

Example:

Floor space: 4 panels x 3 panels
(4x2+1) x (3x2+1) - 12 = 51 adjustable feet

High Load:

5000 kg/panel (1x1m) (*)

Positioning of adjustable feet in the corners, on the edges and in the center of the floor panels.

Number of adjustable feet required:

Number of panels in width x 2 + 1
x number of panels in depth x 2 + 1

= number of adjustable feet

Example:

Floor space: 4 panels x 3 panels
(4x2+1) x (3x2+1) = 63 adjustable feet

(*) Surface load = static load evenly distributed over the entire surface of a panel (1x1m).

For items SP 13, SP 30, SP 50 and SP 60, a permissible point load of 1.4 kN (approx. 250 kg) distributed over an area of 25 x 25 mm has been determined.

The same load values can be assumed for SP 12.

These values do not apply to the cover plate U6 in panel SP13. No load values are available here.

Corner Position

On corner panels, the adjustable feet are placed without lateral overlap on either side. Only one panel can be placed onto one foot.

Edge Position

On edge panels, the adjustable feet are placed with a lateral overlap on one side. Two panels can be placed onto one foot.

Center Position

On center panels, the adjustable feet are placed with an overlap on both sides. Four panels can be placed onto one foot.

Attention:

When using trucks, wooden strips must be placed under the wheels!

When using mobile lifting platforms, laying plates must be used during this time!

The inspection panel F 308 Cfl S1 has no rear hook and can be removed by simply lifting it upwards.
First remove the surrounding connectors, then use the F2 tool to take out the panel in order to access the installations under the floor.

The drawing remains basically valid!

The F 314 Cfl S1 connectors are used in the middle of F 304 Cfl S1, which is a composite of four panels. The F 315 Cfl S1 ramp elements and the F 309 Cfl S1 must also be connected with the F 314 Cfl S1 connectors.

All dimensions in mm!

The F 106 Cfl S1 connectors are placed at the corners and sides of F 304 Cfl S1, a composite of four panels. They can also be used to cover cable outlets.

All dimensions in mm!
The drawing remains basically valid!

The F 107 Cfl S1 connectors are inserted at the outer edge of the OCTAeco floor surface at each joint of the F 304 Cfl S1 panels.
After installation, the connectors are secured with the SO 410 or SO 400 skirting extrusion.
Likewise, the F 107 Cfl S1 can be used to open the cable outlets in halves.

All dimensions in mm!
The drawing remains basically valid!

Mounting the height adaptor F 312 Cfl S1 with floor panel F 304 Cfl S1

The height adaptor is screwed to the floor panel attachment points with 4.8 x 19 mm self-tapping screws. The screws are fixed over the diagonal of the floor panel.

All dimensions in mm!
The drawing remains basically valid!

Pipes or cables can be laid under the floor between the attachment points.

0,5 inch pipes or installations up to 25 mm high can be laid under the floor.

With an additional elevation under a floor panel 1,5 inch pipes or installations up to 54 mm high can be installed.

All dimensions in mm!

The spacers are placed on the outer edges of the OCTAeco floor at each start and end position.

On the corner panel, the spacers are placed at each position facing the plinth panel.

The plinth panel is placed in front of the spacers and fastened with the skirting extrusion from above using self-tapping countersunk screws P 720/20.

Corner mounting position

The SO 620/L and R floor edgings are attached with ISR 4x16 countersunk screws. Please make sure to start laying the strips from the corner.

All dimensions in mm!
The drawing remains basically valid!

Attention: LEDs reflections on shiny floor!

SO 660 completely illuminates the plinth panel area and can be installed with an OM 100 converter up to 21.5 m in length.
